

HalalPilot

From a shoebox of documents to a halal application a certifier will accept.

WorkBuddy expert team · Dormathon Track 2

THE PROBLEM

Her sambal is halal. She just couldn't prove it.

A small business. A big opportunity. One paperwork barrier.

MAK EMBUN / HOME SAMBAL MAKER

Eleven years perfecting her sambal.

Recipes, invoices and supplier certificates.
She has the files, but no application-ready pack.

THE SUPERMARKET BUYER

"I want 500 jars a month. Just send me your halal certificate."

She never called him back.

The documentation stood between her and the shelf.

01 Scattered paperwork

Invoices, certificates, recipes and SOPs.

02 Costly support

Consultant fees and manual back-and-forth.

03 Missed opportunities

Retail orders she cannot take on.

ONE PROMPT

Her real mess, one sentence.

The files she already has become the starting point.

Her folder. Her laptop. Her next step.

01 START WITH HER BUSINESS FOLDER

Recipes
Ingredients & ratios

Invoices
Supplier receipts

6 certificates
Raw material evidence

SOPs
Kitchen procedures

Kitchen photos
Premise evidence

One folder.
No reformatting.

02 TELL WORKBUDDY THE GOAL

Agents read the evidence and build the pack directly in her folder.

"Get me ready for halal certification."

ONE PROMPT

WHY WORKBUDDY

Her evidence is files on her laptop, not a chat message

A chatbot

Can talk about halal rules.

Can’t open her invoices, run a check and hand her a finished pack.

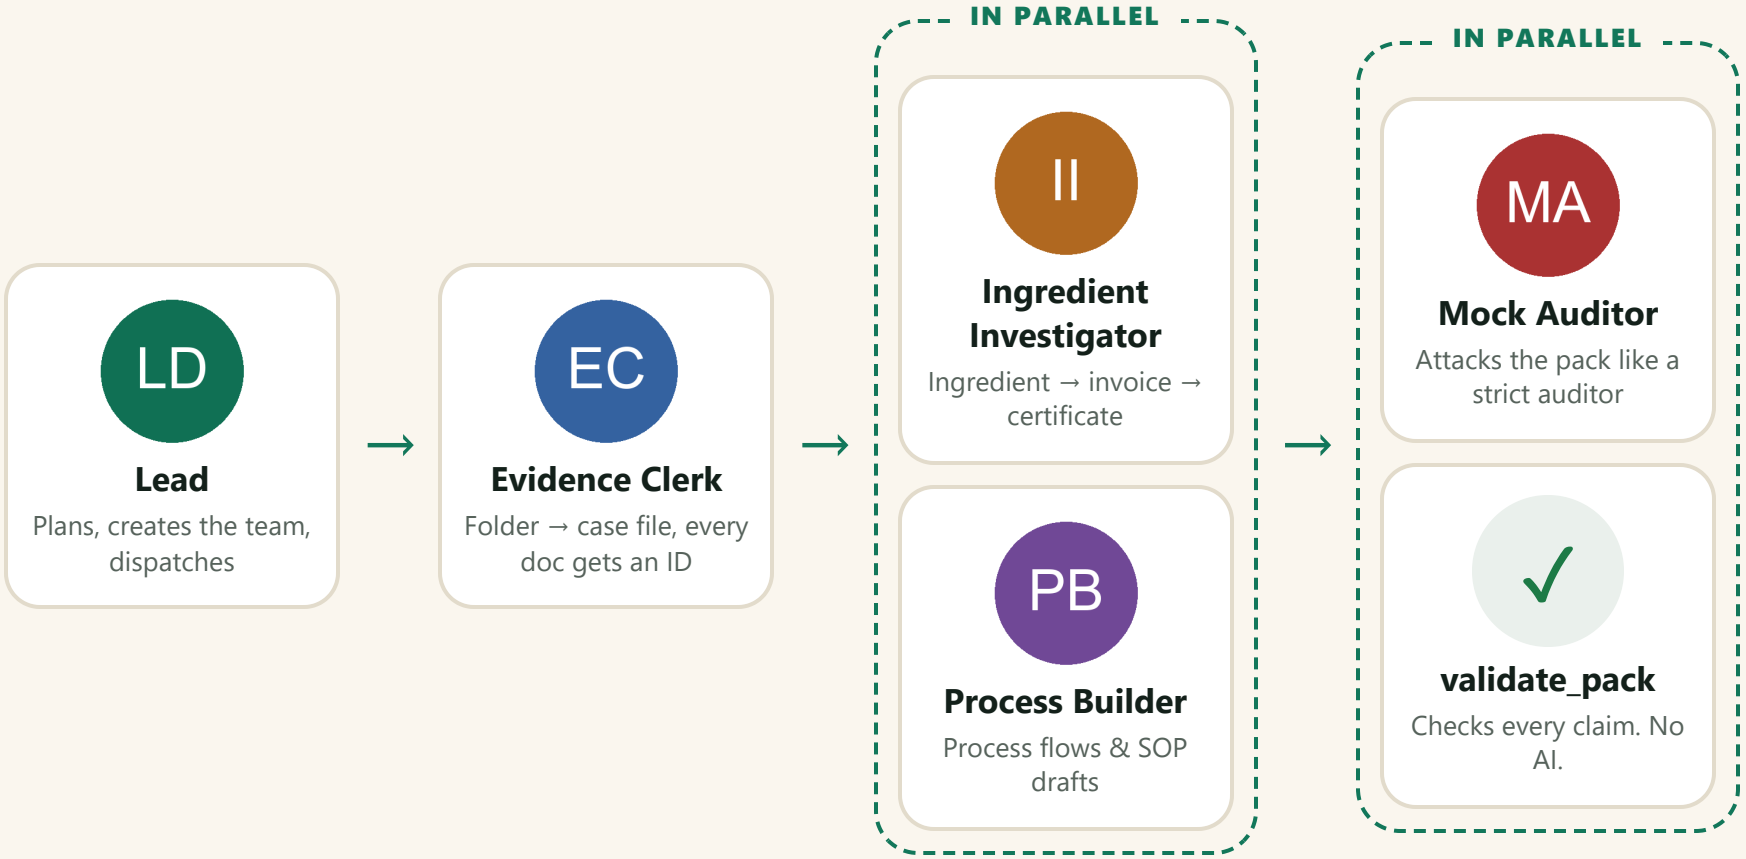

WorkBuddy agents

Work directly in her folder.

- Read every file
- Run our validation script
- Write the documents back

HOW IT'S BUILT

One plugin · five agents · two shared skills

↶ **Failures go back to the agent that owns them, get fixed, and are checked again (up to 3 rounds)**

One rulebook: the halal rules live in shared WorkBuddy skills. **The readiness score comes from the validator, not the AI.**

WHAT IT FOUND

Four problems that are easy to miss in a folder of paperwork

EXPIRED

Dried chilli

Certificate expired **31 July**. She bought chilli on **18 August**.

MISMATCH

Dried shrimp

The certificate belongs to a different company's **branded packs**. She buys **bulk, unbranded** shrimp from another supplier. Name matches, proof doesn't.

NO CERT · HIGH RISK

Chicken flavour powder

Made from chicken fat and chicken powder. **No halal certificate** at all.

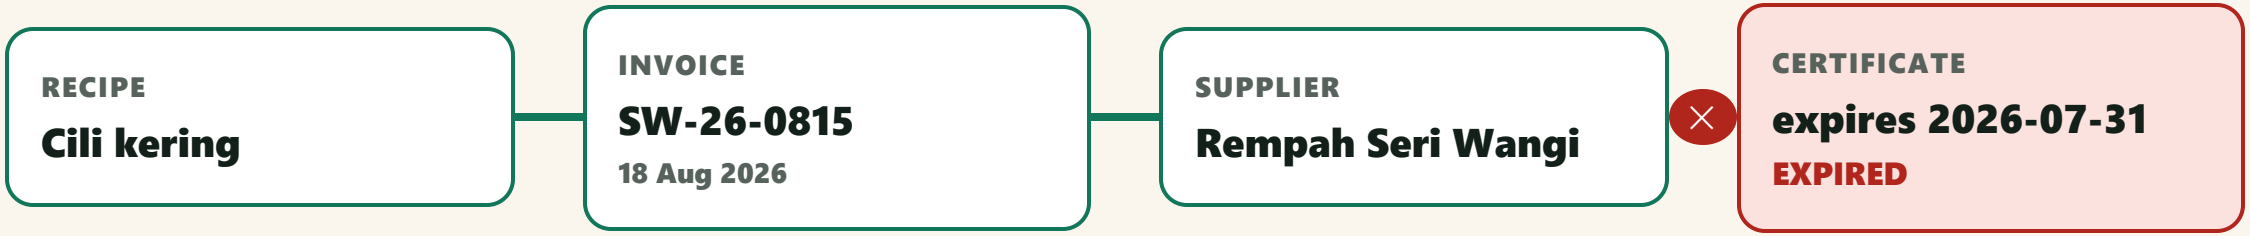

MISSING SOP

Cleaning & sanitation

Listed in her SOP index, but **the document doesn't exist**.

INGREDIENT X-RAY

Every verdict links back to the exact file it came from

Anything it can’t prove is marked NEEDS_REVIEW. It never guesses. Every claim cites a file; the validator rejects invented evidence.

THE RESULT

A pack she can act on today

- ✓ **Readiness score** computed by the validator
- ✓ **Ranked “do these first” list** of blockers
- ✓ **Supplier messages** already written in Bahasa Melayu, ready to send
- ✓ **Process flows & SOP drafts**, including the missing cleaning SOP

One prompt. One goal. End to end.

Mak Embun’s sambal was always halal.

Now she can prove it.
